

Cultivate a robust career as a data scientist, accumulating experience in statistical analysis and machine learning, while focusing on leveraging data to inform strategic business decisions.

PROFILE SUMMARY

- **Offering expertise of over 4 years with consistent track record of progression**, repeatedly achieving goals and producing immediate improvements in the data science domain, specializing in statistical analysis and machine learning within the consulting and logistics industries, demonstrating a strong analytical mindset and problem-solving capabilities.
- Established **"Advanced Analytics"** as a new Practice (Data Scientists, Business Consultants, Business Analysts & Data Engineers); built Delivery Capability, set up Processes and Governance; met the business KPIs consistently while scaling up the practice.
- Simulated, designed, developed & deployed computationally complex and practical data; built and delivered comprehensive data strategy roadmap; ensured final deliverables were of the highest quality.
- Knowledge and experience in developing and implementing **predictive analytics solutions** through classical and **Machine Learning Techniques**.
- Led advanced data science initiatives, leveraging **machine learning, statistical modeling, and AI** to drive strategic business outcomes and enterprise-wide decision-making.
- Directed cross-functional data science teams, fostering innovation and delivering scalable analytical solutions across domains such as customer intelligence, operations, and product optimization.
- Translated complex data insights into actionable strategies, influencing executive-level decisions and contributing to measurable revenue growth and operational efficiency.
- Supported in **continuously evolving technology, communicating data findings to both technology leaders and business managers** to help organization meet business challenges.

CORE COMPETENCIES

Data Analytics/ Integration & Visualization

Data Science Techniques

Business Intelligence Solutions

Statistical Analysis/ Predictive Modelling

Requirement Gathering & Analysis

Deep Learning Architectures and Techniques

Performance Metrics Development

Risk Assessment & Mitigation

Team Building, Mentoring & Leadership

SOFT SKILLS

Communication & Collaboration

Leadership & Delegation

Planning & Innovation

High Business Ethics & Trustworthy

Visionary & Decision-maker

Change Agent

EDUCATION

2022: Post Graduate Diploma in Statistical Methods and Analytics (PGDSMA) from Indian Statistical Institute Chennai Centre (ISI-Kolkata), Chennai

2018: B.Tech.(Chemical Engineering) from Malaviya National Institute of Technology (MNIT- Jaipur), Jaipur

IT SKILLS

- **Languages:** Python (Pandas, PyTorch, Scikit-learn, LangGraph), R programming, SQL
- **Developer Tools and Skills:** ML/AI, GenAI, MLOps, Azure, Git, Spark, Jira, LangChain, PowerBI, ETL

PROJECTS

Feb'22-Jun'23: Stock Price Prediction Using Machine Learning

- Implemented techniques to decompose time series into trend, seasonality and random component, compare forecasted results, test and validate different models such as ARMA, ARIMA, and LSTM.
- Obtained a favorable outcome with a Root Mean Squared Error (RMSE) score of 30% signifying the model's proficiency in forecasting stock price data.

WORK EXPERIENCE

Jan'23-Present: KPMG Assurance and Consulting Services

Growth Path:

Consultant(Data Scientist)

Assistant Manager

Roles:

- **Designing, validating, and backtesting a Credit Risk Analysis Model for Morgan Stanley** using logistic regression, consistently achieving a Tjur R^2 of 0.7 on test datasets and maintaining recall between 0.75 and 0.8; ensured model robustness through rigorous validation testing and historical backtesting techniques.
- Simultaneously developing a robust **Probability of Default (PD) model** and simulating margin losses under multiple stressed macroeconomic scenarios to enhance enterprise-level risk assessment.
- Engineering and operationalizing an advanced anomaly detection framework across 1,400+ variables by leveraging Local Outlier Factor, Z-test, and Mahalanobis Distance methodologies—achieving 99% accuracy and a perfect 100% recall rate to ensure comprehensive detection of anomalies in high-dimensional data environments.
- Implementing a high-efficiency automation pipeline to seamlessly transfer model outputs from R to XLSX, reducing production cycle time by **90%** and eliminating manual errors, thereby enhancing reporting speed, accuracy, and scalability.
- Developing dynamic scripts for comparative analysis of monthly data files across key metrics, generating actionable insights for UI development teams and enabling integration with interactive, data-driven dashboards.
- Utilizing a versatile technology stack, including **R and Python programming, machine learning, Git, Power BI, Excel, and statistical techniques such as ARIMA, logistic and linear regression, time series forecasting, and anomaly detection, to deliver end-to-end analytical solutions.**
- Defining BI roadmap to develop specific objectives for business domains and developed budgets, resources and operations to support the same.
- Suggesting technology-based solutions for enhancing functional efficiency, achieving business excellence, managed risks and planned for contingencies to ensure minimal effect on deliverables.

PREVIOUS EXPERIENCE

Jul'18-Nov'19: HPCL Mittal Energy Pvt. Ltd., Bathinda as Engineer

Roles:

- Analyzed complex business processes and delivered strategic technical solutions to enhance operational performance and efficiency.
- Conducted in-depth **Root Cause Analysis (RCA)** of equipment failures and authored comprehensive mitigation reports, resulting in reduced downtime and long-term risk avoidance.

INTERNSHIP

Jul'22-Dec'22: Maersk Global Service Pvt Ltd. as Data Scientist Intern

Exposure:

- Engineered and deployed a Random Forest-based classification model to analyze over 20 million booking records, attaining an **82%** recall on test datasets.
- Strategically fine-tuned classification thresholds to maximize recall without compromising precision in differentiating between completed and canceled bookings.
- Conducted in-depth time series analysis on daily case registrations, applying the SARIMA forecasting model and achieving a Mean Absolute Percentage Error (MAPE) of 35%, thereby enabling more informed operational planning.
- Leveraged a comprehensive technology stack including Python, Scikit-learn, Azure Databricks, SQL, Power BI, and advanced machine learning techniques such as XGBoost, Random Forest, classification algorithms, model serialization with Pickle, and time series models including ARIMA and SARIMA.

PERSONAL DETAILS

- **Address:** Noida, Uttar Pradesh
- **Languages Known:** English & Hindi
