Total Exp. – 3.8 Years

Summary

- Currently working at **PJ SoftTech Pvt Ltd** on backend operations as a Data scientist, I have been working for 3.8 yrs as a Data Scientist. Designed and implemented a pipeline for product data with **MySQL, Pandas, Python, Machine Learning, deep learning, NLP, and Excel**.
- Worked on **Data cleaning, Data Acquisition, and Data validation** with large data sets of Structured data. Good experience in **SQL** databases like SQL, and MySQL.
- Good programming skills in analytical programming tools such as **Python, Pandas and Machine Learning algorithms, Deep learning** algorithms, **NLP** Analytical and problem-solving skills.
- Working with **Power BI**, for data visualization. (join kinds, merge query append query, Transform data, etc.)
- Ability to independently and effectively organize and manage multiple assignments with excellent analytical and problem-solving skills.

Technical Skills:

- **Machine Learning:** Regression, Classification, Clustering, Deep Learning.
- **Deep Learning:** ANN, CNN, RNN, LSTM, GRU, activation function, gradient decent, backpropagation
- **Natural Language Processing (NLP):** Word Embedding, TF-IDF, Bag of & Word2vec spaCy, NLTK, Hugging Face Transformers- LSTM, BERT, LLM, GenAI etc.
- **Python:** Matplotlib, NumPy, Pandas, Statistics, Scikit Learn, Exception Handling
- **Data Preprocessing:** Data cleaning, Imputation, Scaling, Encoding
- **Data Analysis:** Pandas, Machine Learning, Power BI
- **Data Manipulation and Analysis:** Pandas, NumPy, SciPy
- **Data Visualization:** Power BI, Matplotlib, Seaborn
- **Statistical Analysis:** Hypothesis testing
- **Feature Engineering and Selection:** Dimensionality reduction(PCA), Feature extraction, Feature importance
- **Model Evaluation and Validation:** Cross-validation, ROC-AUC curves, Precision Recall Curves.
- **Version Control:** Git, GitHub, etc.
- **Web Development framework:** Flask
- **Tools:** Jupiter Notebook, PyCharm & Google Collab.
- **Database:** MySQL
- **Cloud Servers AWS:** EC2, S3, IAM, Amazon S3, Amazon RDS, Amazon Lambda, Amazon VPC, Amazon Redshift, Amazon Glacier.

Education:

- **Bachelor of Engineering** from Savitribai Phule Pune University in **Mechanical Engineering** with 80%.
- **Diploma** in Mechanical Engineering with 68%

Achievements:

- Microsoft Certificate: **98-381-MTA:** introduction to programming using Python with 85%
- Skill Nation Certificate: SQL(structure query language)

Work experience

- Company : PJ SoftTech Pvt Ltd(2nd DEC 2024 to Till Date)

- **Project 1:** Store sales prediction.

Domain: - Retail

AIM: This project focuses on predicting sales in medical stores using machine learning. The goal is to help pharmacies and healthcare retailers forecast future sales based on historical data, seasonal trends, drug demand, promotions, and external factors like diseases or pandemics. By leveraging ML models, we can optimize inventory management, prevent stockouts, and reduce overstocking.

"Environment: Python 3, Pandas, Numpy, MySQL, machine learning.

- **Company:** Argus System. (Aug 2021 to 30 Nov 2024)
- **Project 1:** Digital Transformation in the Banking Sector.

Domain: - BFSI

Aim: Banks struggle to convert liability customers into borrowers due to generic loan offers and high rejection rates.

This project aims to develop an AI-driven loan interest optimization system that personalizes loan offers based on a customer risk profile, financial behavior, and creditworthiness ultimately increasing loan approval rates and profitability.

"Environment: Python 3, Pandas, SQL, ML.

- **Project 2:** Image detection in Healthcare domain

Domain :-Healthcare domain

Aim: This project focuses on using AI-based image detection to assist doctors in diagnosing diseases from medical images like X-rays, MRIs, and CT scans. The goal is to automate and improve early disease detection, reducing misdiagnosis and saving doctors' time.

"Environment: Python 3, Pandas, SQL ML, Deep learning

- **Project 3:** Sentiment Analysis of feedback financial services company

Domain: - BFSI

Aim: This project focuses on analyzing sentiment in financial services using NLP techniques. We aimed to extract insights from customer feedback, financial news, and social media data to improve risk management, and customer experience. By applying machine learning and deep learning models, we automated sentiment classification into positive, negative, or neutral categories.

"Environment: Python 3, Pandas, Numpy, MySQL, Machine learning , NLP.

Declaration

I hereby declare that the above information furnished is true to the best of my knowledge.
