

LIJA DEBATA

ASSISTANT MANAGER | 4+ YOY | BANKING CREDIT RISK AND RETAIL

MARKETINGTOOLS : PYTHON, SQL , SAS , EXCEL , POWERBI

E MAIL : lijadebata05@gmail.com

MOBILE : 7327897140

BANGALORE

PROFILE

Experienced Analyst with 4+ years in Credit Risk and Retail, leveraging statistical modeling, machine learning, and data-driven frameworks to enhance risk assessment and decision-making. Proficient in anomaly detection, deep dive analysis, and providing actionable insights across IFRS-9 PD modeling, default prediction, customer segmentation, and marketing optimization—driving measurable improvements in financial stability and business performance.

SKILLS

- **Programming language:** PYTHON,SQL,SAS
- **Data Visualization & BI Tools:** POWER BI,EXCEL
- **Machine Learning:**
Scikit-learning, XGBOOST, Random Forest, Logistic Regression , Decision Tree, K- means clustering.
- **NLP & Text Analytics:**
Sentiment Analysis, News sentiment Integration.

ACADEMICS

MBA from Astha School of Management(2019-2021).

WORK EXPERIENCE

- **SPI Technologies, Assistant Manager, Bangalore(202409-Present)**
- **Molars Technologies Pvt. Ltd , Sr. Data Analyst, Pune(202308-202409)**
- **Reliance Retail, Assistant Manager, BBSR(202104-202308)**

PERSONAL DETAILS

Gender: Female

Nationality: Indian

Language known: English , Hindi , Odia

WORK EXPERIENCE

Professional Experience:

Risk Analytics and Modeling for Banking Client/ Stock Price Forecasting & Sentiment Analysis

- Built banking behavioral scorecards using Logistic Regression and Random Forest, enabling more accurate credit risk profiling and customer segmentation.
- Improved model performance and interpretability by engineering behavioral features and validating models through cross-validation and performance metrics (e.g., **ROC-AUC**).
- Conducted financial news sentiment analysis using NLP and combined it with options data to generate real-time Put-Call Ratio (**PCR**) for better market insight.
- Developed LSTM models to forecast stock prices, enhancing market prediction accuracy.
- Integrated structured market data with unstructured textual data (news, social media) to support informed trading strategies and investment decisions.

Risk Analytics and Modelling for Banking Client

- Designed and implemented **IFRS-9** compliant **PD** models using Logistic Regression and Random Forest, improving credit risk assessment accuracy.
- Collected and analyzed historical credit data and default events to build robust, forward-looking credit risk models.
- Performed roll-rate transition matrix analysis to track delinquency movements across risk buckets, enhancing model granularity and early risk identification.
- Conducted feature engineering and model validation using metrics like **ROC-AUC**, **precision**, and **recall** to ensure model reliability and regulatory compliances.

CRM at Leading E-Commerce Company

- Built customer churn prediction models using Logistic Regression, Decision Tree, and Random Forest, and applied RFM analysis and K-Means clustering for customer segmentation.
- Performed data preprocessing, EDA, and feature importance analysis using Python and SQL to identify key churn and segmentation drivers.
- Evaluated model performance with accuracy, precision, recall, and F1-score, enabling targeted retention strategies and optimized marketing campaigns.
- Developed interactive dashboards and visual reports using Power BI and Excel to communicate findings and support data-driven decisions.
