

Pranay Ravindra Patankar

(+91) 8668760247 | patankarpranay09@gmail.com | [LinkedIn](#) | Pune, India

Profile Summary

- 4.5+ years of experience as a Data Scientist specializing in machine learning, statistics modeling and data analytics.
- Developed ML models, credit scorecards, and customer segmentation solutions for data-driven decisions.
- Proficient in Power BI for creating insightful visualization and dashboards.
- Hands on experience in forecasting using Time Series.
- Capable of understanding business needs & aligning initiatives with strategic goals to enhance efficiency & revenue.

Skills Summary

- **Programming Language:** R Programming, Python, SQL.
- **Data Visualization:** Power BI, MS Excel.
- **Data Science:** Statistics, Machine Learning, Customer segmentation, Credit scorecards, NLP, Data analytics.
- **Cloud & Web Development:** GCP (Cloud Storage, Big Query, AutoML) & Flask, R.

Work Experience

Bajaj Allianz Life Insurance Co. Ltd | Data Analytics

Full Time | Oct 2022 – Present | Pune, India

Deputy Manager – Data Science

- Develop & deploy ML models, credit scorecards and customer segmentation techniques to drive business growth.
- Design predictive analytics solutions to enhance customer acquisition, retention, and risk assessment strategies.
- Build real-time Power BI dashboards for tracking key business metrics, policy purchases, and customer insights.
- Work closely with business stakeholders to identify data-driven opportunities and improve operational efficiency.
- Developed innovative solutions such as an Underwriting Capacity Planning Calculator, a Fuzzy Name-Matching Algorithm, and customer retention strategies, leading to better resource planning, a **77% increase** in identification accuracy, and a **15% rise** in policy purchases, driving overall efficiency and growth.

TPA Recommendation Model

- Built a rule-based model to optimize Third-Party Administrator (TPA) selection at the pin code level.
- Increased **home visit completion rates from 68% to ~90%**, leading to faster medical check-ups.
- Improved **Turnaround Time**, faster medical and enhanced overall policy issuance speed.

Upsell Propensity Model

- Developed an XGBoost model to identify single policyholder customers likely to purchase another policy, improving upsell targeting and conversion rates.
- By targeting single policyholders, we increased the likelihood of them purchasing a second policy. Historical data showed that the conversion rate from the second to the third policy was higher than from the first to the second.
- **Impact:** Increasing conversion from the first to the second policy from **2.1% to 6%**.
- **Techniques:** XGBoost, KS, WOE, IV & Scorecard.

DRE: Customer Segmentation & Sales Optimization.

- Implemented customer segmentation using decision tree algorithms to identify high-propensity customers from the partner's data for upselling. Enabled targeted marketing strategies, resulting in surpassing the **₹5 Crore target** in new business sales within a single quarter.
- **Techniques:** Decision Tree, Customer Segmentation, Sales Data Analysis, Predictive Analytics.

Birlasoft Limited | Data Science

Full Time | Feb 2021-Oct 2022 | Pune, India

Software Developer - Jr. Data Scientist

- Utilized **NLP** to extract key insights from Pharma PDF documents for data-driven decision-making.
- Demonstrated expertise in **web scraping** with Python's BeautifulSoup to extract data from multiple websites.
- Standardized, cleaned, and validated large datasets to ensure data integrity for accurate analysis.
- Employed statistical methods and EDA to interpret complex data, producing reports and visualizations.
- Collaborated with US Pharma clients to align project objectives and problem statements.

Specialty Pharma - Cloud Transformation Project

- Developed a custom PDF parser & designed wrapper on GCP Healthcare API to identify and mitigate Adverse Events.
- Achieved precise field extraction, proactive identification of Adverse Events, and improved data accessibility. Organized data into structured key-value pairs within a GCP Big Query Table.
- **Techniques:** GCP Entity Extraction ML model, GCP Healthcare API, data organization in GCP Big Query.
- Implemented Flask Restful APIs for local testing and seamless integration.

Education

Savitribai Phule Pune University
Master of Science in Statistics

Full Time | 2018-2020 | Pune, India
CGPA – 7.5/10

Sir Parshurambhau College
– Bachelor of Science in Statistics

Full Time | 2015-2018 | Pune, India
Percentage – 80.2%
